## Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims:**

1. (Currently Amended) A display system, detachable from a host device, the display system, comprising:

a power source;

a processor coupled to the power source;

a memory coupled to the power source and the processor;

a transceiver coupled to the processor;

a flexible electronic display coupled to the processor and the power source;

a coupler for coupling the flexible electronic display to the host device; and

a flexible touch sensor movable with the flexible electronic display; and

wherein the transceiver receives information from the host device when the

display is decoupled from the coupler, and images are provided on the display based on the

information.

- 2. (Original) The display system of claim 1, wherein the flexible electronic display is electronic paper (e-paper).
  - 3. (Original) The display system of claim 1, wherein the flexible display is foldable.
- 4. (Original) The display system of claim 1, wherein the host device is a handheld computer.
- 5. (Original) The display system of claim 1, wherein the flexible touch sensor includes a transparent coating.

- 6. (Original) The display system of claim 1, wherein the flexible touch sensor includes an electrotextile.
  - 7. (Currently Amended) A portable electronic device, comprising: a housing; a coupler connected to the housing; and

a flexible display screen assembly, the flexible display screen assembly being having a first viewing area providing images that are viewable by a user when coupled to the coupler and expandable to provide a larger viewing area, at least when decoupled from the coupler, the flexible display screen assembly including,

a power source;

a processor coupled to the power source;

a memory coupled to the power source and the processor;

a flexible electronic display coupled to the processor and the power source; and

a flexible touch sensor movable with the flexible electronic display, providing an enlarged touch sensor area when the viewing area of the flexible display screen assembly is

enlarged.

- 8. (Original) The portable electronic device of claim 7, wherein the flexible electronic display is electronic paper (e-paper).
- 9. (Original) The portable electronic device of claim 7, wherein the flexible display is foldable.
- 10. (Original) The portable electronic device of claim 7, wherein the portable electronic device is a handheld computer.
- 11. (Original) The portable electronic device of claim 7, wherein the flexible touch sensor includes a transparent coating.
- 12. (Original) The portable electronic device of claim 7, wherein the flexible touch sensor includes an electrotextile.

- 13. (Currently Amended) A foldable display assembly, comprising:
  - a power source;
  - a processor coupled to the power source;
  - a memory coupled to the power source;
  - a transceiver coupled to the processor;
  - a foldable electronic display coupled to the processor and the power source;
  - a coupler for coupling the foldable electronic display to a host device; and
  - a foldable touch sensor foldable with the foldable electronic display; and
  - wherein the transceiver receives information from the host device when the

display is decoupled from the coupler, and images are provided on the display, based on the information.

- 14. (Original) The foldable display of claim 13, wherein the foldable electronic display is electronic paper (e-paper).
- 15. (Original) The foldable display of claim 13, wherein coupler includes a coupler for coupling to a handheld computer.
- 16. (Original) The foldable display of claim 13, wherein the flexible touch sensor includes a transparent coating.
- 17. (Original) The foldable display of claim 13, wherein the flexible touch sensor includes an electrotextile.

18. (Currently Amended) A handheld computer, comprising: a housing;

an expandable display assembly supported on the housing, providing a viewing area when the expandable display assembly is folded and providing a larger viewing area when the expandable display assembly is expanded; and

a touch sensor associated with the expandable display, the touch sensor being enlarged when the expandable display is expanded; and

wherein a user may view images on the viewing area when the display assembly is folded and when the display assembly is expanded.

- 19. (Original) The handheld computer of claim 18, wherein the expandable display assembly is electronic paper (e-paper).
- 20. (Original) The handheld computer of claim 18, wherein the expandable display assembly is foldable.
- 21. (Original) The handheld computer of claim 18, wherein the portable electronic device is a handheld computer.
- 22. (Original) The handheld computer of claim 18, wherein the touch sensor includes a transparent coating.
- 23. (Original) The handheld computer of claim 18, wherein the touch sensor includes an electrotextile.

Atty. Dkt. No. 035451-0175 (3721.Palm)

24. (Original) A method of using a handheld computer, comprising:
viewing an image on an unenlarged viewing area of a flexible display;
providing input to the handheld computer via a touch sensor having an unenlarged sensing area associated with the flexible display;

enlarging the flexible display to provide an enlarged viewing area;
viewing an image in the enlarged viewing area;
providing input to the handheld computer via a touch sensor having an enlarged sensing area associated with the flexible display.

- 25. (Original) The method of claim 24, further comprising: decoupling the flexible display from the handheld computer.
- 26. (Original) The method of claim 24, further comprising: providing input using a fingertip.
- 27. (Original) The method of claim 24, further comprising: providing input using a stylus.
